

RKON's Managed Services

Application Management Services

Application Management as a Service (AMaaS) provides full lifecycle management for your critical business applications—from databases and DevOps to development, support, and automated quality assurance. We help you optimize performance, improve security, and free up internal resources.

Our Core Services

Database Management

Expert setup, tuning, and monitoring to ensure your databases are secure, high-performing, and always available, supporting seamless application performance and data reliability.

Application Development

Custom-built applications tailored to your business needs, with end-to-end management to ensure they're optimized, secure, and scalable from day one.

DevOps Services

Accelerate deployments with automated, efficient CI/CD pipelines. We bridge development and operations to deliver faster updates and improved software agility.

Quality Automation

Intelligent automated testing catches issues early and ensures your apps run smoothly, reducing risk and enhancing end-user experience.

Application Support

Responsive support for all business applications—resolving issues quickly to minimize downtime and help your team stay productive.
