

## RKON's Managed Services

# Data Center Management as a Service

DCMAAS offers end-to-end management of enterprise data environments across public clouds (Azure, AWS, Google) and our secure private cloud, through a unified platform with centralized visibility, backup, replication, and disaster recovery. All backed by SLAs and predictable pricing.

## Our Core Services

### Public Cloud Services

Scalable, secure cloud computing on leading platforms. We manage setup, optimization, monitoring, and security, so you benefit from enterprise-grade cloud performance without the complexity or capital expense.

### Private Cloud Services

Dedicated and fully managed cloud infrastructure, tailored to your needs. Gain enhanced control, privacy, and security for sensitive data and critical applications delivered from our purpose-built datacenter.

### Infrastructure Management

Expert management of your IT backbone servers, storage, and networks. Includes **24/7 monitoring**, performance optimization, updates, and troubleshooting for maximum uptime and efficiency.

### Backup & Replication

Automated, secure backups with local and off-site storage. Ensure fast recovery of data, systems, or entire environments to maintain business continuity.

### Disaster Recovery

Comprehensive DR planning and execution to minimize downtime after any disruption. From failover systems to off-site replication, we ensure your operations recover quickly and securely in the event of an attack.

## Why RKON

- **25+ years** of IT advisory and cybersecurity experience
- Global access to accredited security professionals
- Technology-agnostic
- Full-stack services that integrate seamlessly
- Understand and maintain compliance readiness and audit requirements
