

RKON's Managed Services

Network Site Management Services

Network Site Management as a Service (NSMaaS) provides end-to-end management of distributed network infrastructure across multiple locations. From on-premise systems to remote sites and secure connectivity, we ensure performance, reliability, and protection—backed by expert support and proactive monitoring.

Our Core Services

Network Infrastructure Management

We manage all physical network hardware—routers, switches, firewalls, Wi-Fi, and UPS systems—with **24/7 monitoring**, maintenance, and performance tuning to ensure smooth, secure connectivity.

Premise Server & Domain Management

Expert oversight of your local servers and domain services, including health monitoring, security patching, and access control—keeping on-site systems reliable and secure.

Managed WAN / VPN

Seamlessly connect remote sites, mobile users, and cloud applications through fully managed WAN and VPN solutions delivering fast, secure, always-on connectivity.

Remote Site Management

Full network support for branch offices, retail locations, and satellite locations—remotely monitored and managed to maintain performance and reduce the need for extensive on-site IT staff.

Network Security Management

Comprehensive network security with **proactive monitoring** of firewalls, intrusion detection, and access control. We defend against threats and **ensure compliance** with best practices.

Why RKON

- **25+ years** of IT advisory and cybersecurity experience
- Global access to accredited security professionals
- Technology-agnostic
- Full-stack services that integrate seamlessly
- Understand and maintain compliance readiness and audit requirements
