RKON®

Secure GCP Engineering Essentials
GCP Hardened Landing Zone

BUILD IN SECURITY FROM THE BEGINNING. Build a turnkey Google Cloud organization ready for production workloads in regulated markets. This engagement prepares your environment for security, scalability, and compliance so you can focus on your business.

Secure Cloud Preparation

SaaS apps, data lakes, containers, serverless, and AI/ML workloads. This 16-week engagement includes several phases to prepare and instantiate your new Google Cloud environment:

» Workshops with technical leads
» Customization and tailoring
» Infrastructure as Code setup
» Hands-on implementation
» Documentation and cross-training

NIST   HIPAA   ISO

AICPA SOC 2   PCI DSS COMPLIANT

Popular Compliance frameworks supported

Platform Experts

RKON will collaborate with your team to design a cloud organization structure that will grow with your business. The team will discuss, document, and implement key architectural decisions & configuration settings to help your team manage security consistently at scale.

Engagement Scope

This engagement covers a broad range of domains including:

- Unify your Identity and Access management
- Establish billing & granular accounting
- Ensure secure resource tiers and workloads
- Deploy secrets management
- Automate project & resource deployments
- Collect data for security operations and monitoring
- Use policy as code to achieve compliance frameworks
- Harden networks with segmentation and policy encryption
- Automate KMS rotation

Why RKON

- **Cloud security specialists, not generalists:** Deep, hands-on cloud security expertise.
- **Security that actually ships:** Advisory plus implementation, not just reports.
- **Compliance without the chaos:** FedRAMP, SOC 2, PCI, and more, done right.
- **Faster, secure cloud adoption:** Reduce risk, cost, and operational drag.
