RKON®

Secure GCP Engineering Essentials
GCP Security Assessment

THOROUGHLY ASSESS YOUR CLOUD SECURITY POSTURE. In just three weeks, RKON will assess your cloud environment and deliver prioritized recommendations for over 300 security settings specific to Google Cloud.

Comprehensive Cloud Security Analysis.
Over the course of the engagement, RKON will lead a series of tasks, including:

- Discovery sessions
- Data collection and analysis
- Report generation & analysis
- Report delivery & outbrief

Pragmatic, Actionable Intelligence. This engagement includes a written report with a prioritized list of findings with recommended remediation steps for improving security, such as:

- Limit Internet exposure
- Find over-provisioned permissions
- Identify gaps in controls and policies
- Implement secrets management

Domains for the assessment include:

- Resource Management
- Identity & Access Management
- Network security
- VM security & data security
- Security operations
- GKE security & Kubernetes security
- Data governance
- Serverless security
- Organization policies

Outcomes

This assessment empowers teams to prioritize essential security issues, delivering significant benefits that enhance overall resilience:

- Confidence in the status of your security controls
- Clear roadmap of improvements for your environment
- Opportunity to discover new security services for your organization
- Learn to use Google Security Services as a force multiplier for your security team
- Provide your team with an opportunity to work with experienced cloud security architects to address your risks

Why RKON

- **Cloud security specialists, not generalists —** deep, hands-on cloud security expertise.
- **Security that actually ships —** advisory plus implementation, not just reports.
- **Compliance without the chaos —** FedRAMP, SOC 2, PCI, and more, done right.
- **Faster, secure cloud adoption —** reduce risk, cost, and operational drag.
